Problem Statement

People with special dietary restrictions may become frustrated or confused by the lack of visibility for food items that comply with these restrictions. Not being able to easily know if a restaurant accommodates their needs can make picking a place to eat a difficult task. Our solution would provide users with a resource to more easily find restaurants and food items that fit their dietary needs.

Who is experiencing the problem?

People with special dietary restrictions for various reasons.

What is the problem?

It can be difficult to find food, and the places that serve it, that fit the needs of those who have dietary restrictions for multitudes of reasons.

Where does the problem present itself?

The problem presents itself around mealtimes at universities for students, though it is an issue worldwide and presents itself more commonly than most would assume.

Why does it matter?

It matters because the basic necessity of eating is applicable to everyone, and dietary restrictions should not make it harder to do so.
